Art Unit: 1646

- 1) Claims 1 to 19 are pending in the instant application.
- 2) The amendment to the specification which was filed on 16 January of 2002 has not been entered because it does not comply with 37 C.F.R. § 1.121, which requires that amendments to the specification be made only by employment of replacement paragraphs. See 65 Fed. Reg. 54603 (Sept. 8, 2000) or the Official Gazette of 19 September of 2000 (1238 Off. Gaz. Pat. Office 77).
- 3) Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 to 4, drawn to a membrane preparation comprising a dopamine receptor protein, classified in class 530, subclass 350.
 - II. Claims 5 and 6, drawn to a method of producing a protein by employing a recombinant host cell, classified in class 435, subclass 69.1.
 - III. Claims 7 to 15, drawn to a binding assay employing a recombinant host cell expressing a cell surface animal receptor protein, classified in class 435, subclass 7.21.
 - IV. Claims 16 to 19, drawn to a compound of unspecified constitution which inhibits agonist binding to a dopamine receptor, classification undeterminable.

The inventions are distinct, each from the other because:

The membrane preparation of invention I and the inhibitory agent of invention IV are presumable two different chemical compounds each of which can be made and used without the other. Distinctness is further shown by the fact that these two different compounds lack a

common utility that is based upon a common structural feature lacking from the prior art which is identified as the basis for that common utility.

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product, as claimed, can be isolated from a natural source, which process is materially different from the recombinant method of invention II.

Invention III is not directly related to any of inventions I, II and IV.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
